Klaus Hausmann  
Book Review Editor  
Berlin, Germany

## Aims & Scope

Articles deal with protists, unicellular organisms encountered free-living in various habitats or as parasites or used in basic research or applications. The European Journal of Protistology covers topics such as the structure and systematics of protists, their development, ecology, molecular biology and physiology. Beside publishing original articles the journal offers a forum for announcing scientific meetings. Reviews of recently published books are included as well. With its diversity of topics, the European Journal of Protistology is an essential source of information for every active protistologist and for biologists of various fields.

## Subscription offer to members of the

**Federation of European  
Protistological  
Societies  
(FEPS)**
